PROFILE

Computer Science graduate from UNSW with experience in software development, technical problem-solving, and student support. Strong communication, teamwork, and organisational skills developed through university teaching and extracurriculars. Adaptable and comfortable learning new technologies and working in collaborative environments.

EDUCATION

University of New South Wales February 2023 – August 2026

Bachelor of Science in Computer Science with Distinction

EXPERIENCE

University of New South Wales | *Casual Academic* February 2024 – Present

- Delivered engaging laboratory demonstrations and one-on-one support to students, adapting explanations to suit a range of learning styles.
- Managed teaching, marking, and student enquiries while meeting strict deadlines in a fast-paced academic environment.
- Collaborated with academic staff to improve course content, incorporate student feedback, and develop clear, accessible learning materials.

University of New South Wales | *Examination Supervisor* May 2024 – Present

- Assisted students with basic technical issues on university computing systems during examinations, helping minimise disruptions.
- Reported technical issues, potential misconduct, and other concerns to relevant staff while adhering to examination and university policies.
- Coordinated with examination staff to maintain an organised, safe, and smoothly operating exam environment.

EXTRACURRICULAR

CompClub | *Coding Teacher* November 2023 – January 2025

- Led a team of mentors and subcommittee members, encouraging collaboration to implement coding workshops at high schools
- Spearheaded outreach initiatives to extend workshop access, prioritising underrepresented communities and promoting diversity in STEM
- Explained programming concepts to students with varying levels of experience, adapting guidance to support their learning.

UNSW Software Development Society | *Project Lead* January 2023 – December 2023

- Led a collaborative frontend development project, managing communication, task distribution, and milestone tracking across team members.
- Collaborated with team members to design, develop, and refine project features while ensuring project objectives were achieved.

PROJECTS

Gamification App for Jira: JiraQuest (HTML, CSS, JavaScript, React, Node.js, Figma)

- Integrated frontend components with Jira APIs to display dynamic user data such as task progress, rewards, and level-up notifications in real time.
- Developed responsive frontend interfaces and iterated on UI functionality through collaborative testing and feedback.

Find Your Friends (HTML, CSS, JavaScript, React, Node.js, Google Maps API, Figma)

- Developed an interactive web application integrating Google Maps to display friends' locations and online status.
- Built a responsive sidebar interface that lets users search for, add, and view friends and their availability.
- Designed user-friendly UI prototypes in Figma and collaborated with team members to implement features and deliver a cohesive user experience.

SKILLS

Technical: Linux and Shell commands, Git, Python, HTML, CSS, JavaScript, TypeScript, React, Node.js, REST APIs, Figma, Vercel, Adobe Creative Cloud, Microsoft Suite

Soft: Problem-solving, adaptability, teamwork, communication, time management, organisation
